

CONSERVATION ENHANCEMENT ACTIVITY

E528R

CONSERVATION STEWARDSHIP PROGRAM

Management Intensive Rotational Grazing

Conservation Practice 528: Prescribed Grazing

APPLICABLE LAND USE: Pasture, Range

RESOURCE CONCERN ADDRESSED: PLANTS

ENHANCEMENT LIFE SPAN: 1 Year

Enhancement Description

Management intensive, multi-paddock grazing system where livestock are regularly and systematically moved to fresh forage to optimize quantity and quality of forage growth, improve manure distribution, improve wildlife cover, and improve soil health.

Criteria

- Management-intensive rotational grazing increases harvest efficiency of vegetation with grazing and/or browsing animals through smaller paddock sizes, higher stock density while maintaining plant residue with enough energy reserves to recover quickly when adequate soil moisture is available for regrowth.
- Must develop and implement a written grazing plan that:
 - Increases stock density
 - Shortens grazing periods
 - Enhances plant recovery
 - Matches the forage quantity and quality produced with the grazing and/or browsing animal

E528R – Management Intensive Rotational Grazing	August 2019	Page 1
---	-------------	----------

CONSERVATION STEWARDSHIP PROGRAM

- Increases harvest efficiency and manure distribution by significantly increasing the existing stock density per herd
- Removal of forage will be in accordance with site production limitations, rate of plant growth, the physiological needs of forage plants and the nutritional needs of the livestock.
- Deferment (non-grazing period less than one year) and/or rest (non-grazing period equal to or greater than one year) will be planned for critical periods of plant needs.
- Manage livestock rotation based on rate of plant growth, available forage, and allowable utilization target.
- Manage livestock rotation to provide adequate ground cover and plant density to decrease soil erosion, reduce runoff and improve infiltration and water holding capacity.
- Minimize concentrated livestock areas to enhance nutrient distribution and improve or maintain ground cover.
- Utilize higher stock density and shorter grazing periods in riparian areas to minimize impact to stream bank or shoreline stability and ensure other sensitive areas such as wetlands, habitats of concern, karst areas do not become degraded.
- Implement and maintain a rotational grazing system using a combination of permanent or temporary division fences and water facilities to serve the management needs of operation.
- Develop and follow contingency plans to deal with drought or flooding or other episodic disturbance events.

Develop and implement a monitoring plan that at a minimum evaluates livestock performance, plant community composition and density, and soil function components such as ground cover, infiltration and aggregate stability.

CONSERVATION STEWARDSHIP PROGRAM

Documentation and Implementation Requirements

Participant will:

- Prior to implementing, obtain a grazing plan map delineating the existing paddock system, along with a livestock inventory (type, class, average weight, and number) to document the current stocking density and current stocking rate.
- Prior to implementation, acquire a prescribed grazing plan, with a plan narrative delineating the following:
 - The goals and objectives of the plan
 - Map showing the number of paddock subdivisions with water sources, proposed stock densities per paddock associated with different herds in the system
 - Forage Inventory
 - Forage / Animal Balance
 - A grazing plan narrative describing the basis for when livestock movement or rotation will occur
 - A contingency plan
 - A monitoring plan
- During implementation, keep pasture/herd in/out records, stock density records and photos of paddock condition and photos of high stock density grazing implementation
- After implementation, provide the following items for review by NRCS:
 - Written grazing plan with maps showing fencing and water layout and managed stock densities for each herd.
 - Paddock/herd in/out records with actual stock densities documentation.
 - Photos of paddock(s) condition and improved forage utilization and photos of high stock density grazing.
 - Changes made to the grazing management plan.

CONSERVATION STEWARDSHIP PROGRAM

NRCS will:

- As needed/requested provide technical assistance to participant.
- Prior to implementation, provide and explain NRCS Conservation Practice Standard Prescribed Grazing (Code 528) and supporting documents that are needed to implement this enhancement, such as forage-animal balance forms.
- Prior to implementation, review the existing grazing plan, maps and livestock inventory provided by the participant.
- Review the newly proposed grazing plan fencing and watering layout, associated maps and stock density numbers for each herd.
- After implementation, review the following:
 - Written grazing plan with maps showing fencing and water layout and managed stock densities for each herd.
 - Paddock/herd in/out records with actual stock densities documentation.
 - Photos of paddock(s) condition and improved forage utilization and photos of high stock density grazing.
 - Changes made to the grazing management plan.

NRCS Documentation Review:

I have reviewed all required participant documentation and have determined the participant has implemented the enhancement and met all criteria and requirements.

Participant Name _____ Contract Number _____

North Dakota Sideboards: Documentation requirements for meeting the 528 practice must be implemented to fulfill the requirements of this enhancement. Refer to the 528 specification and the Statement of Work for guidance on meeting practice specification. To meet the intent of the enhancement grazing periods must be an average of 5 days or less. If a producer's rotation is already an average of 5 days or less they can become eligible by showing a reduction in average grazing periods.
